CAREER OBJECTIVE

First Class Honors Business Information Technology student specializing in Business Intelligence awaiting graduation. Proven experience in full-stack software development (C#, Flutter) and AI/ML model deployment (Python, Scikit-learn). Skilled in building scalable data architectures, optimizing SQL retrieval patterns, and translating complex business requirements into technical solutions. Award-winning hackathon participant with a strong track record of leadership in technical teams.

EDUCATIONAL BACKGROUND

2022 – 2026	Strathmore University Bachelor of Business Information Technology, Business Intelligence First Class Honors
2020 – 2022	Aga Khan High School Kampala IB Diploma Programme (36/45)
2016 – 2020	British School of Kampala IGCSE (mean grade: A*)

WORK EXPERIENCE

Jan 2025 – Mar 2025 **Pegasus Technologies, Uganda**

Application Development Intern

- Optimized data access patterns by developing C# and SQL Server services, ensuring high-performance data retrieval and secure management of enterprise transaction schemas.
- Engineered real-time data pipelines for Mobile Money and Bill Payment APIs, implementing rigorous validation, error handling, and logging to ensure data quality and system reliability.

- Architected scalable software solutions using Clean Architecture and MVC, creating reusable components that facilitate easier maintenance and future integration with ML model templates.
- Designed data-driven application modules with state persistence, ensuring accurate capture and documentation of user transaction history for downstream analytical use cases.

Jan 2024 – Mar 2024 **Kawempe Home Care**
Volunteer service: 200hrs

TECHNICAL SKILLS

- **Data Science & AI:** Python, Scikit-learn , R, Generative AI , Sentence Transformers, Model Versioning
- **Data Engineering & BI:** SQL (SQL Server, MySQL, Supabase) , PowerBI , Firebase, MongoDB.
- **Software Development:** Flutter, ReactJS, C#, Laravel, FastAPI, Flask.
- **DevOps & Tools:** Docker, Git/GitHub, Linux Terminal, AWS.

LEADERSHIP & EXTRA CURRICULARS

- OpenDosimeter Project Coding Lead at Strathmore University (2024 – to date)
- Male Swimming Team Captain at Strathmore University (2024 – to date)
- Member of Google Student Developer Club in Strathmore University (2022 – to date)
- Mathmania Team Captain at British School of Kampala (2018 – to date)

AWARDS & ACHIEVEMENTS

- Dean's List Award for Academic Excellence (2025).
- 2nd Runner Up Pesalink Fintech AI Hackathon (2025).
- Dean's List Award for Academic Excellence (2024).
- Dean's List Award for Academic Excellence (2023).
- IB Top performer (2022).
- IGCSE Valedictorian (2020).

KEY PROJECTS

EduPath: AI-Powered Career Guidance Platform

- Developed a specialized career recommendation engine using Sentence Transformers to perform semantic matching between student profiles and degree paths, and a pretrained model to narrow down paths based on peers' choices and performance, effectively solving decision paralysis.
- Engineered the backend infrastructure using FastAPI to provide a real time interface, integrating the OpenRouter API to power a career assistant.
- Leveraged Scikit-learn, Pandas, NumPy, and Optuna to train the model and optimize model accuracy.
- Managed complex relational datasets involving user interests, socioeconomic factors, and academic performance using Supabase (SQL).
- **Technologies:** Python, Scikit-learn, FastAPI, Sentence Transformers, OpenRouter API, ReactJS, Supabase.

Pesalink Fintech AI Hackathon Project: Fake Account Detection

- Engineered a machine learning model to detect fraudulent accounts, facilitating secure batch account validation for high-volume payment processing.
- Performed rigorous feature engineering and data exploration on fintech datasets to identify patterns indicative of malicious activity.
- Balanced high model accuracy with the low-latency requirements of enterprise financial transactions.
- **Technologies:** Python, Scikit-learn, Data Analysis, Pandas, Matplotlib.

OpenDosimeter (Strathmore University Branch)

- Directed a development team to modernize radiation safety hardware, refactoring legacy code to improve system maintainability and scalability.
- Enabled IoT capabilities via Bluetooth integration to ensure high availability and real-time monitoring of healthcare worker safety data.
- Collaborated with stakeholders to translate complex safety requirements into technical specifications and documented code.
- **Technologies:** C++, Arduino Language, IoT Integration, Git.

DonorLink: Transparency-Focused Donation Platform

- Engineered a secure donation pipeline by integrating the MPESA Daraja API for real-time payment validation and fraud prevention.
- Managed data persistence using Firebase to ensure a transparent, audit-ready record of all financial transactions.
- Focused on bridging the trust gap through rigorous validation and error handling in high-stakes transaction environments.
- **Technologies:** Flutter, Firebase, MPESA Daraja API.

Playlisted: Web-Based Analytical Game

- Developed a data-driven web application utilizing the Spotify API to fetch and process user playlist data for interactive gameplay.
- Designed a structured SQL database to manage user scores and song metadata, ensuring data integrity.
- **Technologies:** Laravel, PHP, SQL, Spotify API.

CERTIFICATIONS & HACKATHONS

- Cloud Foundations – AWS Academy Graduate (2025)
- Generative AI Foundations – AWS Academy Graduate (2025)
- Getting Started with Storage – AWS Educate (2025)
- Introduction to Cloud 101 – AWS Educate (2025)
- Data Fundamentals – IBM (2024)
- AI Fundamentals – IBM (2024)
- WIOCC Workshop (2025)
- Starts of Innovation US-Kenya AI Challenge (2025)
- Pesalink Fintech AI Hackathon (2025)
- Oracle Academy SSA Bootcamp – Oracle (2024)
- Battery Innovation Challenge – Enactus Kenya & Schneider Electric (2024)

REFEREES

Referees available upon request.
